Privileged access

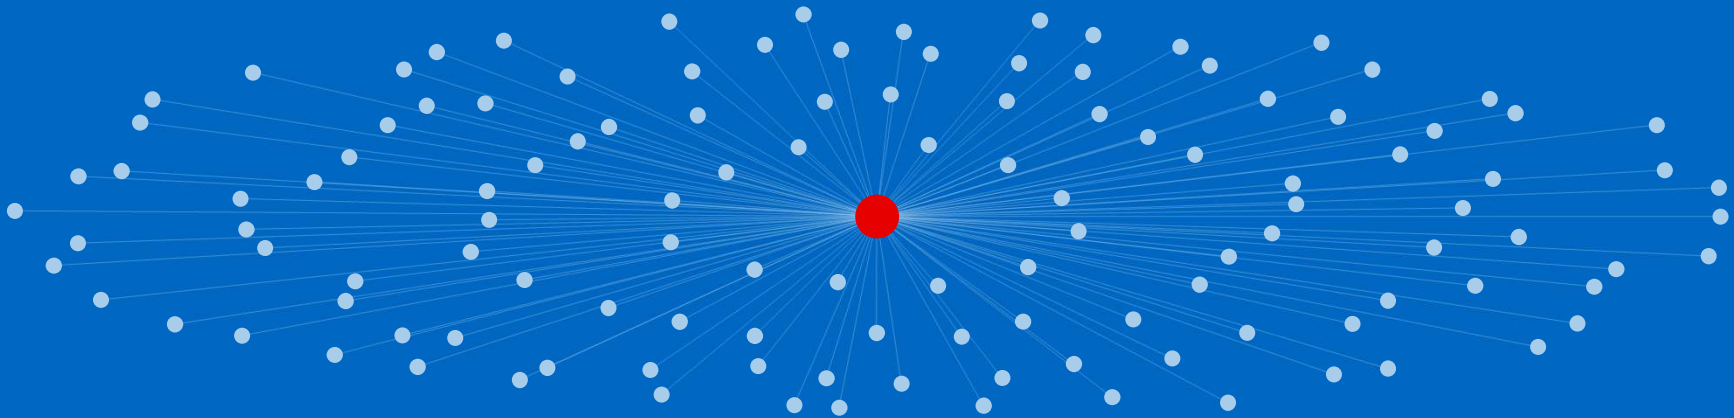

September 2026

David Grandolfo

THE ATTACKER'S POINT OF VIEW

Why hack 200 companies when you can hack one?

ABOUT THE SPEAKER

David Grandolfo

Entrepreneur and cybersecurity specialist

8 years

VP of Operations and
co-owner of an MSP

25 years

in IT and
defensive cybersecurity

I've sat where you're sitting.

THE 30-SECOND TEST

Three questions. Stopwatch ready.

1

The tech who left six months ago: how many of your clients can they still get into?

2

Your biggest client demands a list of your access and the logs from Tuesday's session. When can you deliver that?

3

Are your admin accounts separate from your everyday accounts, with MFA on each one?

Your client. Their auditor. Their insurer. All three ask the same questions — and your client signed a form that ties their policy to your answers.

PAM is what lets you answer in 30 seconds — with proof.

WHAT MAKES AN ENTERPRISE-GRADE PAM

A password vault is not a PAM.

01

Centralized, rotated secrets

Passwords and keys centralized, changed after every use.

02

Just-in-time access

Access granted on request, for a limited time, then revoked.

03

Least privilege

Each account gets only the rights its task requires.

04

Logged sessions

Every privileged session is logged and auditable.

Thank you — see you tomorrow.

Bring your questions.

Tomorrow · “PAM in Practice” workshop

We'll open the console right in front of you. You'll leave with the deployment blueprint.
